# First Teeth

## Soothing Teething Oil

# What is First Teeth?

Teething can be an uncomfortable stage for babies and a challenging time for parents trying to provide comfort.

First Teeth is a gentle, plant-based oil designed to support babies during the teething stage. The formula is intentionally simple, using only two ingredients chosen for their gentle and supportive properties.

Copaiba Essential Oil, valued for its naturally soothing qualities, is combined with a lightweight MCT carrier oil to create a blend that can be applied directly to the gums during periods of teething discomfort.

Used alongside gentle gum massage, First Teeth provides a natural approach to supporting babies as teeth begin to emerge.

# A Gentle, Plant-Based Approach

## **Minimalist Formulation**

Focused on comfort and soothing care.

## **Respecting Development**

Designed to support babies during the teething stage while respecting natural development.

## **Trusted Solution**

A calm, supportive approach for parents navigating this milestone.

# Two Ingredients. Pure Purpose.

## **1. The Active:**

Copaiba Essential Oil  
(*Copaifera officinalis*)

## **2. The Base:**

MCT Oil  
(Medium Chain  
Triglyceride)

# Nature's Calming Agent: Copaiba

**Source:** *Copaifera officinalis*.

**Function:** Traditionally used in natural wellness for calming and soothing properties.

**Composition:** Contains naturally occurring plant compounds, including beta-caryophyllene, known for its calming and soothing properties.

**Purpose:** Valued for supporting comfort during periods of irritation and sensitivity.

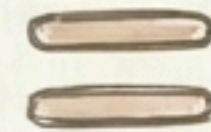

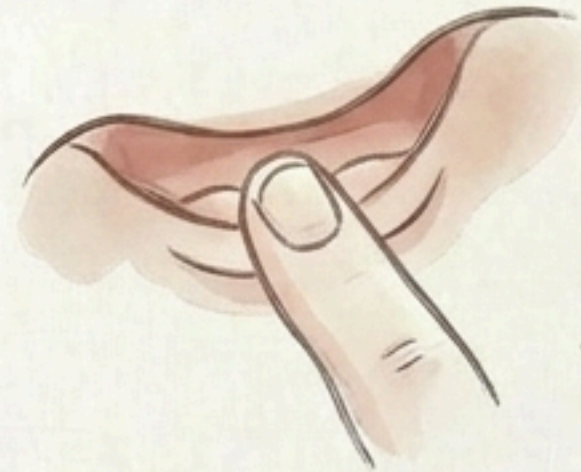

# Why Parents Love First Teeth

- Supports comfort during the teething stage.
- Helps soothe sensitive and inflamed gums.
- Contains naturally occurring plant compounds with antimicrobial and antioxidant properties.
- Gentle, minimal formula designed specifically for babies.
- Suitable for frequent use during periods of discomfort

# Synergy of Touch and Nature

The blend works alongside natural soothing methods like gum massage.

## **Reduction**

Gentle pressure on the gums helps reduce the sensation of discomfort as teeth push through the gums.

## **Distraction**

Rubbing the gums can distract the brain from teething discomfort.

## **Support**

A simple approach encouraging natural soothing.

# Flexible Support & Application

Teething discomfort is usually felt in the gums, where the teeth begin to push through.

Because the nerves in the gums connect to the jaw and ear area, babies may also feel pressure or sensitivity along the jawline or around the ears.

For this reason, First Teeth can be gently applied:

- Directly to the gums
- Along the jawline
- Around the ear area

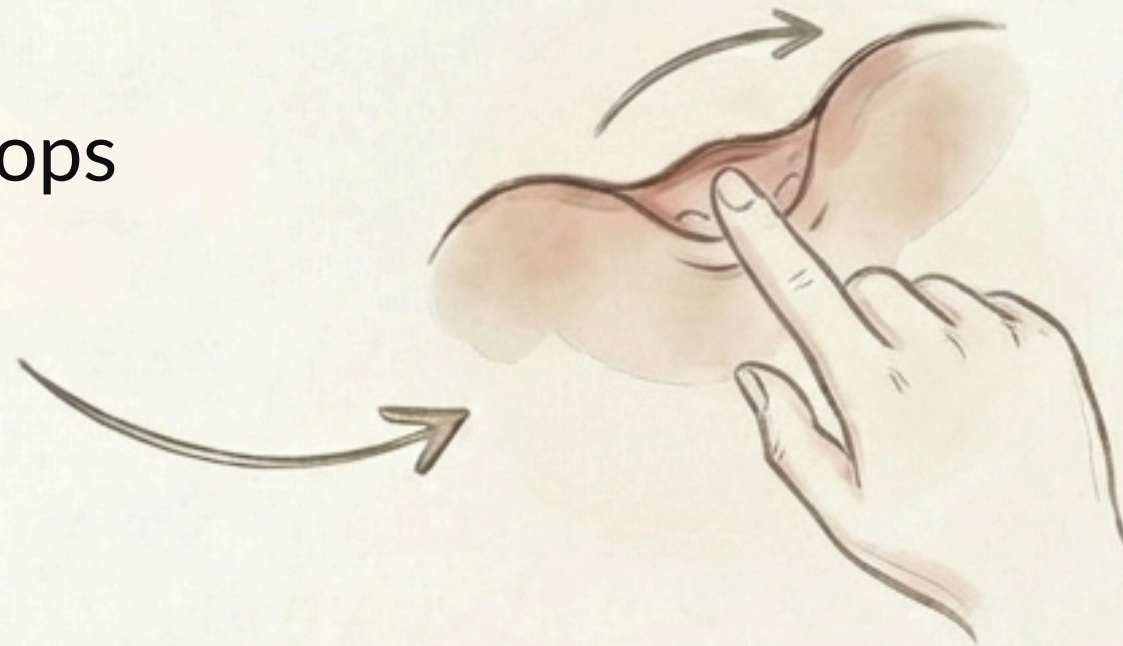

This flexible approach allows comfort to be supported where babies may feel teething pressure most.

# How to Apply

1. Drip 2 - 5 drops onto a clean finger.

2. Gently rub across the baby's gums.

## Important Note:

Apply as often as needed, but do not exceed one application per hour.  
Take care not to rub too harshly, as this may cause additional sensitivity.

# Safety Guidelines

- For topical application to the gums and surrounding skin as directed.
- When applied to the gums, small amounts may be naturally swallowed.
- This product is not intended to be swallowed in larger amounts or used as an internal product.
- Avoid direct contact with eyes.
- If irritation occurs, discontinue use.
- Keep out of reach of children when not in use.
- Store in a cool, dry place away from direct sunlight.

*This product is not intended to diagnose, treat, cure, or prevent any disease. If a baby experiences persistent discomfort, fever, or other concerning symptoms during teething, consult a healthcare professional.*
